## SUMMARY

Dedicated and self-motivated DevOps enthusiast with strong hands-on experience in **Linux server management** and **Amazon Web Services (AWS)**. Proven ability to manage and maintain infrastructure, automate processes, and contribute effectively to website and blog operations. Skilled in handling cloud environments, server configurations, and basic CI/CD implementations.

## EXPERIENCE SUMMARY

**AshiqPradeep.com** (March 2024 – Present)

Designation: **Technical Assistant**

- Performed regular website and blog backup management to ensure disaster recovery readiness.
- Monitored and responded to email inquiries in a timely and professional manner.
- Conducted research and development (R&D) on a variety of technical topics as per manager's guidance.
- Provisioned and managed EC2 instances based on operational requirements.
- Set up web servers on Ubuntu, configuring Apache/Nginx as per application needs.
- Handled domain registration and DNS configurations using Cloudflare and GoDaddy.
- Managed AWS S3 buckets for storing and retrieving website assets.
- Implemented simple CI/CD pipelines using GitHub Actions for automated website content updates.
- Applied IP blocklisting rules within AWS Security Groups based on usage patterns and threats.
- Configured VPC and Security Groups to establish secure AWS networking environments.
- Enabled and maintained free SSL certificates using Cloudflare, ensuring secure HTTPS access for websites.
